Welcome Message

Dear valued customer,

We are thrilled to welcome you to Kopeat Exports, a reputable and registered Manufacturer, Trader and Exporter company based in India. Our mission is to provide you with high-quality and sustainable products that meet your needs and exceed your expectations.

Thank you for choosing Kopeat Exports as your trusted partner in horticulture. We look forward to working with you and helping you achieve your goals.

About Company

Kopeat Exports is a reputable and registered Manufacturer, Trader and Exporter company based in India. The company specializes in coco peat and substrates, offering high-quality products that are both sustainable and eco-friendly. Coco peat is a natural byproduct of coconut husks, which is widely used in horticulture as a soil conditioner and growing medium. Kopeat Exports sources its products from reliable and sustainable sources, ensuring that its customers receive only the best quality materials.

We believe that our customers deserve only the best quality materials.

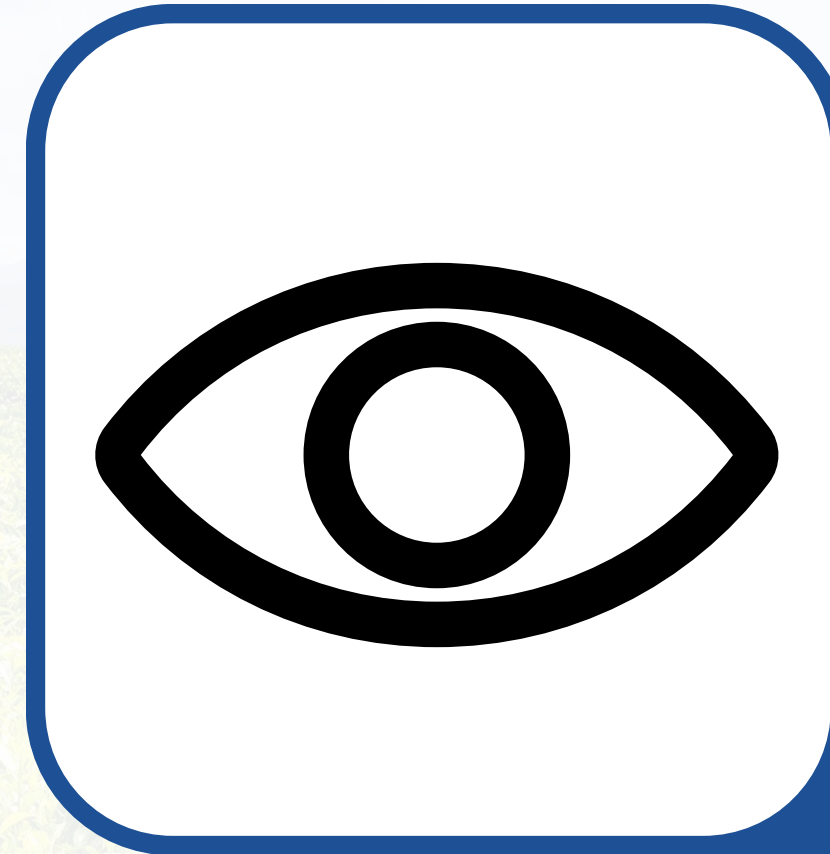

Vision & Mission

Our Vision

Our vision is to become the leading provider of sustainable and eco-friendly coco peat and substrates, recognized for our commitment to quality, reliability, and environmental stewardship. We strive to empower farmers and horticulturists with innovative and affordable solutions that enhance their productivity, reduce their environmental footprint, and promote a healthier planet for generations to come.

Our Mission

Our mission at Kopeat Exports is to provide the highest quality and sustainable coco peat and substrate products to our customers while promoting eco-friendly practices in the horticulture industry. We are committed to sourcing our materials from reliable and sustainable sources, ensuring that our customers receive only the best quality materials. We aim to be the leading provider of eco-friendly horticulture solutions in India and beyond, and to contribute to a greener and more sustainable future for all.

Our Product

Buffered Coco Peat

Buffered coco peat is a premium product offered by Kopeat Exports that has been specially treated to improve its quality and performance as a soil conditioner and growing medium. Our buffered coco peat has been processed to remove any excess salts and impurities that may affect plant growth and to ensure a pH level that is optimal for plant growth. This makes it an ideal choice for horticultural applications such as seed starting, container gardening, hydroponics, and landscaping.

Our Product

Low EC Coco Peat 5kg Block

The 5kg block of coco peat is easy to handle and store, and when hydrated with water, it expands to several times its original size. The expanded coco peat can be mixed with soil or used alone as a growing medium for plants. It has excellent water retention properties, providing plants with a consistent supply of moisture, and is also lightweight, making it easy to transport and work with.

Overall, the Low EC Coco Peat 5kg Block is an excellent option for gardeners looking for a high-quality, low-salt growing medium for their plants.

Our Product

High EC Coco Peat 5kg Block

Coco peat, also known as coir pith, is a byproduct of coconut husks that is widely used in horticulture as a soil amendment. The High EC Coco Peat 5kg Block refers to a compressed block of coco peat that has a high electrical conductivity (EC) level.

High EC coco peat is beneficial for plants that require higher salt levels in their growing medium, such as certain types of flowers or fruits. The high salt content can help with nutrient uptake and can promote healthy growth in these plants.

Our Product

Low EC Coco Peat Brick 650 gm

A Low EC Coco Peat Brick 650 gm refers to a small compressed block of coco peat that weighs approximately 650 grams and has a low electrical conductivity (EC) level.

Coco peat, also known as coir pith, is a natural byproduct of coconut husks that is widely used in horticulture as a soil amendment. Low EC coco peat contains a lower level of salts, making it ideal for plants that are sensitive to high salt levels.

Our Product

High EC Coco Peat Brick 650 gm

A High EC Coco Peat Brick 650 gm refers to a small, compressed brick of coconut coir, a byproduct of coconut husks, that has a high electrical conductivity (EC) level.

EC refers to the ability of a substance to conduct electricity, and in the context of coco peat, it indicates the presence of soluble salts in the material. High EC coco peat contains a higher level of soluble salts, which can be beneficial for certain crops that require more nutrients or have a higher tolerance for salt.

Our Product

Low EC Husk Chips Block 5kg

Low EC Husk Chips Block 5kg refers to a compressed block of coconut husk chips that has a low electrical conductivity (EC) level. Coconut husk chips are obtained from the outer shell of coconuts, and they are a popular alternative to traditional soil amendments in horticulture.

Low EC Husk Chips Block 5kg is an ideal growing medium for plants that are sensitive to high salt levels, as it contains fewer salts. The low EC level ensures that the growing medium doesn't interfere with the plant's ability to absorb nutrients, which is crucial for healthy plant growth.

Our Product

High EC Coco Peat Husk Chips Block 5kg

High EC Coco Peat Husk Chips Block 5kg refers to a compressed block of coco husk chips that have a high electrical conductivity (EC) level. Coco husk chips are obtained from the outer layer of the coconut fruit and are an excellent alternative to traditional soil in horticulture.

Our Product

Long Type Grow Bag

A Long Type Grow Bag is a type of container used for growing plants, particularly those with long roots such as tomatoes, peppers, and cucumbers. As the name suggests, it is a long and narrow bag-shaped container made of fabric or other permeable materials such as felt, which allows for proper aeration and drainage of the soil.

Our **Product**

Open Top Grow Bag

An open top grow bag is a type of planting container used in horticulture for growing plants. As the name suggests, it is a bag made of a porous material that is open at the top, allowing plants to grow out of it.

Our Product

Coco Fiber Bale of 120kg

A Coco Fiber Bale of 120kg refers to a large compressed block or bale made from the fibers extracted from the outer shell of coconuts. These fibers, also known as coir, are long and coarse and are commonly used as a natural and sustainable alternative to peat moss in horticulture.

Our Product

Coco Coir Pellet Discs

Coco coir pellet discs are small, compressed discs made from the fibrous material found in coconut husks, known as coir. The discs are designed to be used as a growing medium for seeds or seedlings.

Overall, coco coir pellet discs are an effective, sustainable, and convenient option for starting plants and are widely used in horticulture and agriculture.

Our **Product**

Coco Coir Pots

Coco Coir Pots are bio degradable pots and an excellent growing medium for plants and can be transplanted into the soil with the pot itself.

Our Product

Coco Grow Baskets

Coco grow baskets, also known as coir grow baskets, are planting containers made from the fibrous material found in coconut husks. They are an eco-friendly and sustainable alternative to plastic pots and other traditional planting containers.

Overall, coco grow baskets are an excellent choice for gardeners who want to grow plants in an eco-friendly and sustainable way while providing optimal growing conditions for their plants.

Our Product
